General Description

A double upright foot orthosis (DUAFO) is a custom fabricated metal brace that supports the ankle and foot area of the body. Patients who have pain or weakness in the foot and ankle due to trauma, disease, deformity or other reason commonly benefit from a DUAFO. A double upright ankle foot orthosis immo-

bilizes, or limits foot and ankle movement to prevent further deformation. The ankle joints may be adjustable to control ankle motion or assist with to pickup. The joints attach to a metal stirrup that is fastened directly to the shoe, but may be attached to a removable plastic or metal footplate that slides in a shoe.
